

How we optimised our client's energy management in

POWER SAVING SOLUTIONS

HOME OF THE HUSSH POD

Arts & Culture

Charly Helyar's art exhibition project is located in South West London.

The Hushh Pod was powering 4 x LED Lights to light up Charly's artwork in South West London.

What did we supply to Charly?

Hushh Pod 1/4

Challenge

With the challenge of needing temporary power to showcase her art, Charly needed power in a shop that was completely off-grid and had no electricity, and needed the capacity to run 4 LED Lights to display her art in all its glory.

Response

Our team began to assess which Hushh Pod would be most appropriate for Charly's application. After discussing with her, she hired out a Hushh Pod 1/4 (pictured bottom left) for 6 weeks.

Outcome

The initial consultation service was deemed very good, 'Kyle [Rogers, Business Development Manager] was very helpful. I would not have been able to run the project without it, it enabled my installation to go ahead, would have been a bit messed up without it'

Charly also mentioned she would recommend us to other businesses in similar fields: '[I would] definitely [recommend]. It was very good, also very easy to move about with strong wheels'. Highlighting her strong need for its portability.
